IXG-2C7

The new IP Apartment Intercom system from Aiphone is a pure IP based solution which can be connected directly onto a network infrastructure without the need for additional system components such as servers and dedicated distributors. Installation time and cost is further minimised by the availability of entrance and room stations which feature PoE for easy wiring.

The Aiphone IP Apartment Intercom system supports up to 9,999 units deployed across 99 interconnected buildings. Regardless of the size of the initial project, with no server required and no licence fees, it could not be simpler to add additional stations when new accommodation units or towers are added.

For mixed purpose buildings and campuses requiring a higher level of security, the IP Apartment Intercom system can be integrated with Aiphone's full IP perimeter and call forwarding system to provide emergency broadcasts and site control.

- Stylish and practical 7" touchscreen entrance station with recording
- 7" touchscreen master station
- Smartphone Application provides remote access and control from anywhere in the World via an Android iOS device

IXG-2C7 VIDEO TENANT STATION

- 7-inch LCD touchscreen
